

Aerial Platform Course (APC)

STORM MOUNTAIN, INC.
Training Division

This program of instruction utilizes classroom, demonstrations and practical application which will allow the student to achieve high levels of accuracy from hovering, slow and medium speed aerial platforms.

This course will introduce our proven mathematical formula and associated training which will allow for operational usage of the techniques taught to be documented as practiced to qualify and certify for operational application.

Our instructional staff has applied the course content in real-world situations in the US and overseas. Their operational experience and instructional backgrounds allow for a truly unique learning experience from the very best trainers available.

This course covers:

- Aerial Platform Introduction
- Aircrew and shooters briefings
- Equipment selection
- Rigging of the aircraft
- Weapon and sight selection
- Aircrew positions and responsibilities
